

Brief History of anti-incineration platform Montcada i Reixac (SPAIN)

The beginning

Montcada's concern about the contamination of the cement factories comes from many years ago.

Prior to the establishment of democracy we were doing demonstrations, writings, collecting signatures, etc., but perhaps in recent years as awareness of pollution, has made the neighbors have mobilized more

In Montcada we suffer all the consequences of bad policy in the management of resources

HWE HAD SUFFERED THE FIRST SPANISH
INCINERATOR

We have an Ecopark (that should serve to separate garbage and recycling) and only serves to compact the trash and then take it to burn or bury.

We have a water treatment plant that take wastewater (of businesses and the urban) and extracts highly contaminated sludge which is then carried to burn in cement factories (besides producing odors).

We have a highly polluted river.

We have nearby the city, landfills that pollute our mountains and rivers

The creation of the Platform

For newspapers we knew the agreement between the ACA (Catalan Water Agency) and cement factories.

They started using sewage sludge as alternative fuel (incineration), later they used other hazardous waste (meat meal, tires, plastics, urban garbage, etc)

Put in cement fly ash and residues from the pharmaceutical industry.

The Platform is created at a meeting of Montcada associations to stop this project

Indignation is very big and coordination meetings are held, with an attendance of 30 to 50 people, where the different actions performed are agreed.

The allegations that we deliver to the Government are firmed by 53 entities.

But our fight is not only in Montcada

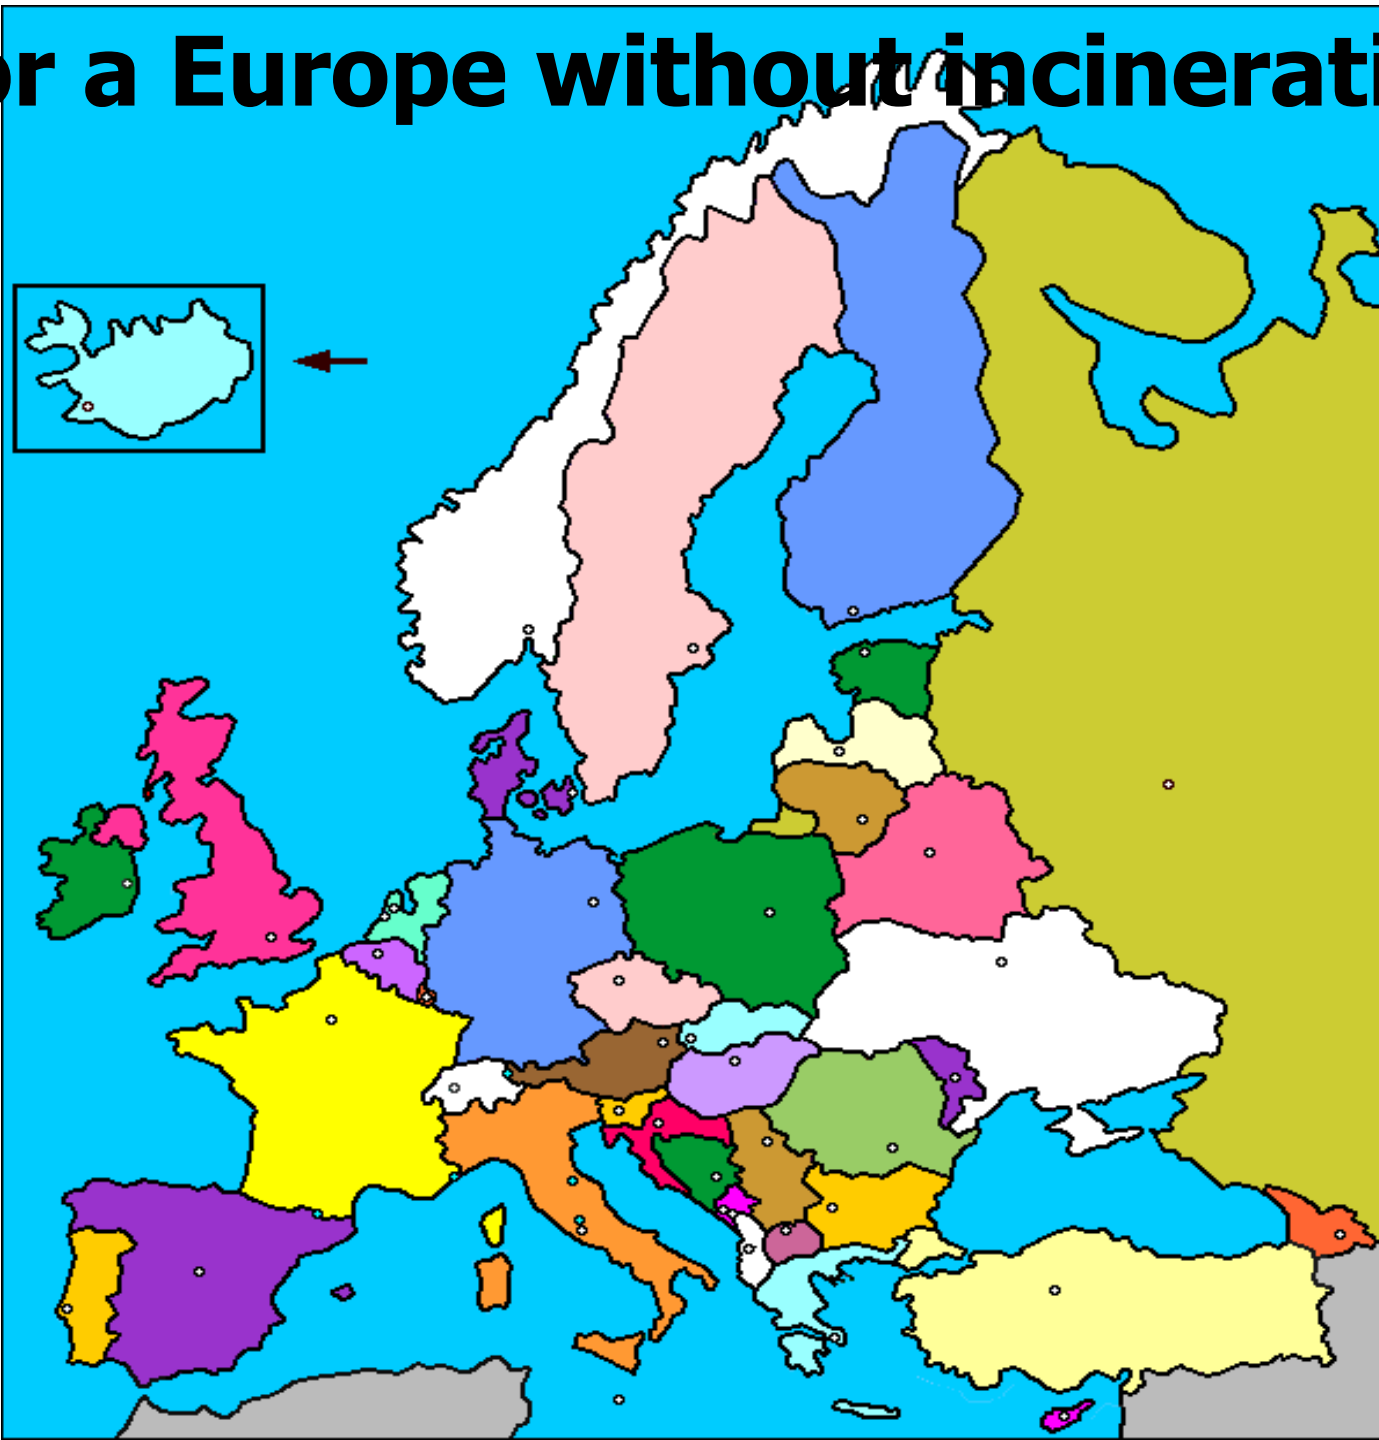

Creation of the coordinator against incineration in Catalonia.

Creation of the State Coordinator against incineration inside cement factories in Spain

For a Europe without incineration

Creation of the State Coordinator against incineration inside cement factories in Spain.

V meeting in "Morata de Tajuña (Madrid)"

Next meeting VI in "Santa Margarida i els Monjos (Barcelona) "

Creation of the coordinator against incineration in Catalonia.

In Montcada we have suffered for 30 years, the first incinerator in Spain

It was closed by the pressure of the people on the streets alarmed by the high rate of cancer and respiratory problems.

First city declared in Spain as a special protection area for contamination.

In the network we are present in

Contacto con una televisión

<http://www.telemir.es.vg>,

Until 2014

- 900 appearances in media
- 60 chats with 3,000 attendees
- 60 different posters 5000 posts
- 200 reported spreadsheets 180,000
- 22 demonstrations with a total of 8,000 attendees
- 3 signature's collecting with a total of 11,200 signatures collected.
- carnivals
- Support of the actor Sergi Lopez, the singer Feliu Ventura and the bands "Itaca Band" and "La Pegatina".
- Short film "Archangels" in the issue of pollution by the cement factory and Zombies

In the courts

The Superior Court of Justice of Catalonia has denied the environmental authorization to the factory Lafarge Cementos, SAU for not to make public the environmental impact statement.

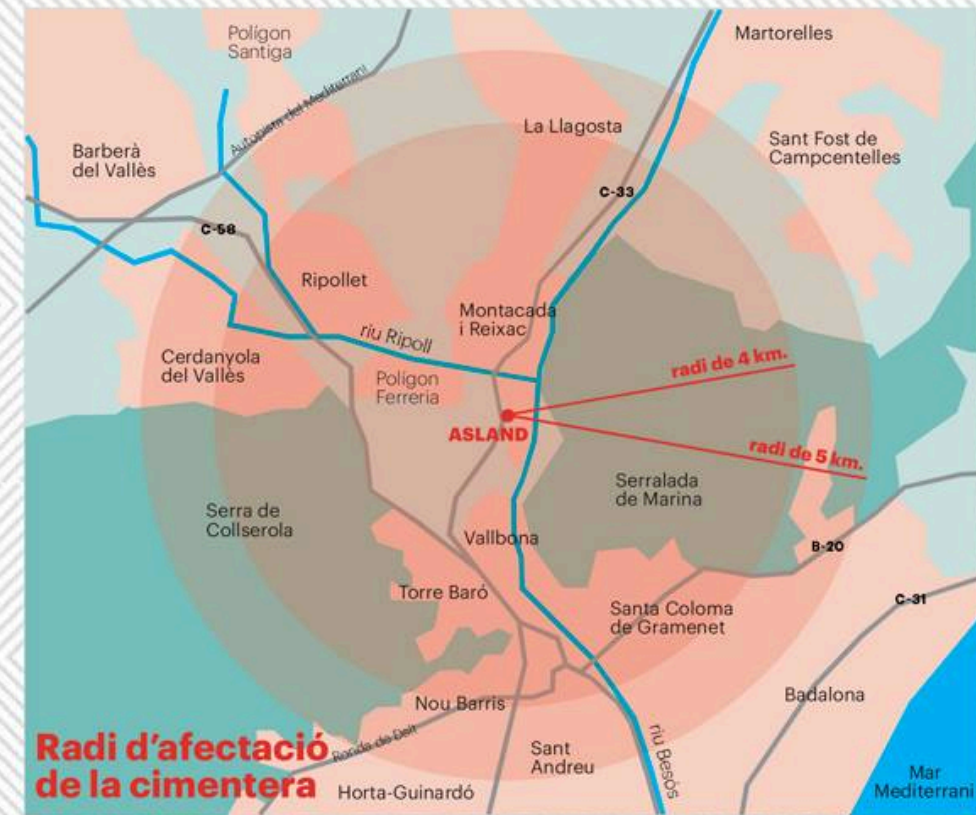

We are awaiting the appeal made by the company and the Government.

In the Court number 2 of Cerdanyola (Barcelona), for excess noise are charged with trespass former mayor and former councilor of healing in Montcada i Reixac and former director of Lafarge Cement factory.

Our attorney is Albert Calduch i Estrem

Lafarge: “El monstre del ciment” continua incinerant residus

Estudis universitaris demostren que en un radi de 5km al voltant d'una cimeterna la contaminació per incineració provoca “un risc molt més elevat” de mortalitat per càncer. I en concret càncer de pleura, estómac, fetge o ovaris.

El ciment és vida?

A la seva web, la patronal Ciment Català assegura que la “filosofia” de l'agrupació s'empara “sota un principi que és tota una realitat: el ciment és vida”. I bé, més val prendre-s'ho amb filosofia. La població que habita en un radi d'entre quatre i cinc quilòmetres al voltant d'una incineradora té un risc més elevat que la resta de patir malalties greus com el càncer, segons es desprèn de diversos estudis universitaris i institucionals. Un estudi de la Universidad Carlos III afirma que la població que viu a un radi de quatre quilòmetres d'una cimeterna pateix més malalties greus. Un altre estudi, signat per Eduard Rodríguez, professor d'investigació a l'Institut d'Investigacions Biomèdiques de Barcelona –on és cap del Grup de Neurotoxicologia Ambiental– i membre del Comitè Científic sobre Nous Riscos per a la Salut de la Unió Europea, amplia la distància a cinc quilòmetres per incineradores de residus urbans o perillosos. L'estudi, presentat el gener d'enguany a Vilafranca del Penedès, conclou que la contaminació per incineració provoca “un risc molt més elevat” de mortalitat per càncer i, en concret, de certs tipus de càncer com el de pleura, estómac, fetge o ovaris. Aquests informes no són els primers que aixequen les alarmes sobre la contaminació per incineració. El maig de 2004, la UNESCO va declarar la contaminació química ambiental com a causa principal d'algunes malalties com el càncer, la infertilitat i les malalties congènites. El juny del mateix any, es va ratificar el Conveni d'Estocolm, pel qual les Nacions Unides aprovaven el seu programa per al Medi Ambient sobre Contaminants Orgànics Persistents (COP). El conveni, aprovat inicialment el 2001, diu que els COP plantegen perills per a la salut humana i el medi ambient. Dins aquests contaminants, s'hi inclouen els Pm10, les dioxines i els furans, entre d'altres. Els COP són subproductes tòxics, persistents i que s'acumulen a l'organisme, derivats de la combustió i de diversos processos industrials com la incineració de residus.

L'Organització Mundial de la Salut (OMS) diu que existeix un perjudici per a la salut en presència de partícules Pm10 suspeses a l'ambient per un valor superior a 20mg. L'Estat espanyol té una mitjana de 40mg i, a Montcada i Reixac, aquest nivell se supera durant una mitjana de quatre hores al dia. Així ho demostra l'anàlisi feta per la Plataforma Antiincineració a partir de dades de la planta de mesura de la qualitat de l'aire que la Generalitat té instal·lada a Montcada.

Studies or important news

A study by the Carlos III University, showed that people living within 5 km of an incinerator or a landfill, are more likely to get cancer.

The number of people living in that range space of the cement factory in Montcada is over 1,000,000 people.

LOOKING THE FOLLOWING TABLE, SEEN THAT THE AVERAGE IS A CONSTANT DE 23 PM10 REGARDLESS OF CONTINUOUS TIME AND DAY OF THE WEEK

THE REST CAN BE DUE TO OR CAR OR DIFFERENT COMPANIES WORKING DURING THE DAY

A study by us, with a database of 800 days of PM10 measurement station located in Can Sant Joan.

It shows that the pollution we suffer is because 80% of the cement factory.

Lafarge Cementos SAU, has threatened to take us to court, if your logo appears on the information we do.

For this reason, that instead we censored.

**KURSAAL DÍA 11 DE NOVIEMBRE
A LAS 20 HORAS**

Organiza: Agrupación de Vecinos de Can Sant Joan

Una producción de Producciones Juan José García, David Pérez, Francho Moya y Daniel...
ARCÁNGELES. Con la colaboración de: República del mundo, Lluís Dipós, Tere Sureda, Miquel...
Estación de cine y vídeo, S.C.A., Brigada de cine de la UCC, Miquel...
García & dirección Franck Espigares

III Encuentro de la Coordinadora Estatal contra la incineración de residuos en cementeras

Montcada i Reixac días 7, 8 y 9 de Octubre

**DÍA 8 A LAS 19:30 HABANERAS Y RON CREMAT
+ ACTUACIÓN DELS DIABLES
PLAZA BOSQUE (CAN SANT JOAN)**

Convoca:
Plataforma Toledo Aire Limpio, Plataforma Bierza Aire Limpio, Plataforma Aire Net de Sant Feliu de Llobregat (Barcelona)
Aire Net Penedès, Área de Residuos de Estelagistas en Acción, Plataforma Sabana Blau de Navarra,
Plataforma No a la Cementera en La Parrilla de Cuenca, Plataforma de Sra. Margarida i els Nanjos (Barcelona)
Asociación de Vecinos de Palloja (Barcelona), Plataforma Albertosa de Teruel, Plataforma Almondolejo sin Contaminación
(Badajoz) y Plataforma Antiincineración de Montcada i Reixac (Barcelona)

"Incineration is CORRUPTION !!"

Paul Connet

"Local, regional and state governments, should direct their policies to eliminate burning and encourage alternative methods of solid waste" Dr. Josep Ferrís i Tortajada

"The cancer, reproductive problems, neurological and endocrine diseases that are reaching epidemic proportions, are associated with exposure to environmental contaminants, particularly toxic chemicals and electromagnetic radiation. Therefore, it is estimated that 90% of cancers are caused by environmental factors (95% in pediatric cases of cancer)

The poor, children and women are the most vulnerable to exposure to environmental contaminants. Over 40% of the global burden of disease attributable to environmental factors falls on children under five years of age (up only 10% of the world population!) "

Dolores Romano

we are controlling

Let's bring those responsible to court accused of corruption, bribery and embezzlement

And conozacan end up in jail if the law is skipped in favor of polluters.

Cement factory burning in Montcada

- It is not to save my people
- It is not yours save
- It is not to save your lifestyle
- It is not mine to save
- It's not even about saving our health
- It's about saving the health of our children !!
- Please do not just stand
- Think about your future, think of them
- Without your help we cannot do it.

IF YOU NOT TO FIGHT FOR WHAT YOU WANT,

DO NOT REGERT FOR WHAT YOU LOST

#Judicialacimentera

SAVE THE WORLD FROM INCINERATION !!
